TOPIC:

EPA Wyoming Regional Haze proposal

Summary:

Mead had questions about EPA's proposed action on Wyoming's regional haze plan, which is the subject of a public comment period thru August 26. Context was a press release issued today by Wyoming for Affordable Power (pasted below). Mead wanted to know what the specific visibility benefits for EPA/State plans were, and also asked about the extent to which EPA will consider public comments before issuing final plan. I noted that details on visibility improvements for different control levels are included in tables in the proposed action and shared email link and referenced example of where to locate information. Also sent reporter updated EPA statement emphasizing commitment to public comment and consideration of all information rec'd. Coordinated with Carl Daly, OEAE, and OAR Comm- John Millett.

A federal plan could potentially impact consumers' power bills

“Stop EPA WY” launched throughout Wyoming

A coalition of organizations committed to keeping electricity rates reasonable for consumers through the viability of coal has launched a campaign throughout the state of Wyoming to inform residents of the potential impacts of a proposed Environmental Protection Agency (EPA) takeover of the state’s clean air program.

Wyoming for Affordable Power is made up of Basin Electric Power Cooperative, the Missouri Basin Power Project, PacifiCorp, Rocky Mountain Power and Wyoming Rural Electric Association. The group has launched “Stop EPA WY,” that includes statewide print, television and digital ads directing people to www.stopEPAWY.com. The website allows people to easily submit comments, asking EPA to acknowledge and respect Wyoming’s authority and discretion to make its own decisions regarding its clean air programs.

At issue is the State of Wyoming’s compliance with the regional haze rules of the Clean Air Act. The Wyoming Department of Environmental Quality previously submitted a plan to the EPA addressing regional haze, which focuses on reduction in nitrogen oxide (NO_x), sulfur dioxide (SO₂) and particulate matter levels from Wyoming power plants.

The EPA, however, disapproved the State’s plan for addressing NO_x and particulate matter and has proposed a federal plan that requires additional expensive emission control technology at utilities throughout Wyoming. The Missouri Basin Power Project’s Laramie River Station, along with PacifiCorp’s Dave Johnston, Jim Bridger, Naughton and Wyodak units are directly impacted by this proposed rule.

According to a statement from Wyoming Gov. Matt Mead’s office read during a June 24 public hearing held by EPA in Cheyenne, “The total capital cost will be more than \$1 billion. ... This is greatly more expensive than the State’s plan, even though EPA’s rule delivers no meaningful improvements to air visibility.”

In fact, according to the Wyoming DEQ, the federal requirements proposed by EPA would result in insignificant visibility differences.

Written comments must be received by the EPA on or before Aug. 26, 2013. Comments can be submitted online at www.regulations.gov, docket number EPA-R08-OAR-2012-0026, via email at r8airrulemakings@epa.gov, via fax at 303-312-6064 or by mail at:
